

OUTCOMES WORK GROUP

MH/MR/DD/BI Commission

March 16, 2006

Major Issues in Any System

- Ability to track service access and utilization across payer sources and providers;
- Need for information sharing protocols to assure client-level information sharing and data analysis at the County level from Medicaid and state payment/state facility data sources as well as from County-generated data;
- Need to develop and consistently apply, record and report level of functioning/diagnostic assessment data among counties, Medicaid and state institution services;

Major Issues in Any System (con' t)

- Need to consistently collect and report consumer self-report information to analyze in concert with statistical data;
- Ability to maintain time series information that would permit analysis of changes in status (living arrangements, employment, etc.) across enrolled consumer populations over time [Note: CoMIS doesn' t do this.]
- Need for up-dated population and service capacity information that quantitatively documents environmental variation among the Counties.

What can we do with what we have?

- Access
- Housing
- Employment

ACCESS

- Penetration rates (proportion of consumers actually served to total population or theoretical demand population)
- Timeliness of access to services (usually measured as elapsed time from intake to first service, time to respond to service needs for emergent, urgent and routine cases, etc.)
- Provider network adequacy (as measured by consumer choice of provider, adequate supply of provider capacity to meet demand, lack of delays or waiting lists to access services, etc.)
- Geographic and physical access (as measured by time to travel to providers, adequacy of public transportation, barrier-free facilities, etc.)

ACCESS—What we have now

- From current CoMIS data:
 - Number served divided by national prevalence data, population, or other proxy (e.g. number of non-elderly SSI recipients)
 - Elapsed time from service application approval to start of service
- Issue: how do we integrate SPP and Medicaid data?

HOUSING

- The individual has rights of tenancy under state/local tenant/landlord law
- The individual has choice in housing location, living arrangements, roommates, etc.
- Community services and supports are available to the individual but acceptance of services is not a condition of tenancy
- The housing is safe, decent and affordable (usually 30% but never more than 50% of the individual's income)

HOUSING—What we have now

- None of these specific items, but CoMIS data do have
 - Living arrangement (apartment, homeless, RCF, etc.)
 - Licensure
 - Facility size
- Issue: how do we integrate SPP and Medicaid data?

EMPLOYMENT

- Typically measured by combination of hours worked in independent employment and wages earned
- Data may or may not be available in CoMIS—not required by state data rules to separate income amounts by type but many counties do

Other CoMIS Limitations

- No history—time-series data analysis not possible
- Point in time looks can be useful as approximate indicators, e.g. if system goal is 50% employment and point in time snapshot shows 20% employed
- CoMIS just a piece of the system—need county-level data from Medicaid, SPP, and state institutions as required by data rules

CAUTIONS

- Tempting as it is, level of functioning is NOT a measure of how well a system is doing
- County-to-county comparisons are equally risky (If you've seen one county, you've seen one county.)
- When we start doing this, we'll see greater need for data integrity/QA

BUT

- There may be some useful comparisons:
 - County compare itself with like sized counties
 - Group reports of counties of like size
 - Group report of a region
 - Statewide totals
 - DHS compare IA with other states
- State can run last 4 types of reports
- Must be available more timely than now
- Each county has to be able to run its own but must have access to state data (SPP, Medicaid, and institutions) for folks from its county.

THE GUINEA PIGS

- How would reports which we can do from existing data look?
- Trial run of data from:
 - Allamakee
 - Polk
 - Winneshiek
 - State Payment Program [unable to report data]
- Present graphically rather than page of numbers

Client Counts by Counties

	MI	CMI	MR	DD	Total
Polk	437	1077	1532	207	3253
Allamakee	10	24	61	2	97
Winneshiek	19	17	66	5	107

Penetration Rate by County

Penetration Rates for County Funded Mental Health Services for Adults in Small and Medium (Rural) vs. Large (Urban) Counties

Time Between Notice of Decision and First Date of Service.

Polk	29
Allamakee	21
Winneshiek	61

Polk Living Arrangements

Allamakee Living Arrangements

Winneshiek Living Arrangements

Polk Employment Status

Allamakee Employment Status

Winneshiek Employment Status

Polk Income Sources

Allamakee Income Source

Winneshiek Income Sources
